

ELEVATOR MODERNIZATION

AT-MOD Package

Flexible Elevator Modernization Solutions

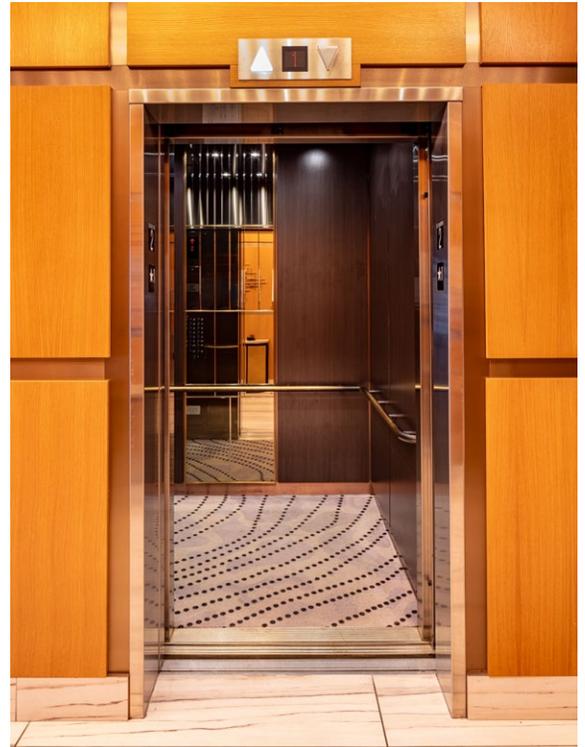

Mitsubishi Electric US, Inc., Elevator and Escalator Division delivers a flexible elevator modernization utilizing best-in-class Mitsubishi Electric elevator controls designed to enhance performance while preserving key existing components. Ideal for buildings where full replacement is impractical due to structural limitations, budget considerations, or the need to minimize tenant disruption, this solution integrates advanced technology with current infrastructure. The result is improved reliability, energy efficiency, and operational performance—without the extensive cost and downtime of a complete system overhaul.

Key Benefits

- **Cost-Effective Modernization** – Upgrade critical systems without the expense of full equipment replacement
- **Minimal Disruption** – Reduce downtime and limit impact on building occupants during installation
- **Enhanced Performance** – Improve ride quality, reliability, and overall system responsiveness
- **Energy Efficiency Improvements** – Integrate advanced controls and technologies that reduce energy consumption
- **Targeted Component Upgrades** – Provide premier Mitsubishi Electric controls and fixtures with the option to also provide Mitsubishi Electric door operators* and mechanical hardware.
- **Extended Equipment Life** – Prolong the service life of your vertical transportation system
- **Improved Safety & Compliance** – Incorporate updated safety features and code-compliant technologies
- **Customized Solutions** – Tailored modernization plans aligned with each building's structure, usage, and operational goals

This strategic approach empowers property owners to maximize existing assets while achieving modern elevator performance, safety, and user experience.

** Consult with your representative to determine whether Mitsubishi Electric door equipment is suitable for your project.*
